

## ELLIPTA Inhaler

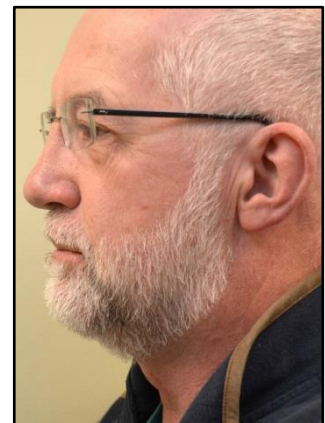

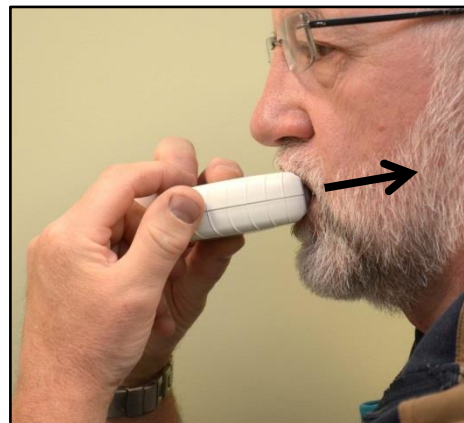

1. Slide cover open until you hear a click. You will see the dose counter go down by one.

2. Hold the inhaler away from your mouth and breathe out one full breath.

3. Close your lips firmly around the mouthpiece.
4. Be careful not to block the air vent with your fingers. Take one long, steady, deep breath in and hold for as long as you can or at least 3 to 4 seconds. Then breathe out gently away from ELLIPTA.

5. Clean the mouthpiece with a clean, dry tissue if needed.
6. Slide cover closed..
